Introduction

Page 05

“We are an innovative company – but we're also one big family.”

Harry Bauermeister,
Managing Director

The Dallmer family business is now in its fourth generation. And even if over the decades times have changed drastically, and along with it the production processes, one thing has remained the same: All Dallmer products are developed, designed and manufactured using state-of-the-art technology in Germany – more specifically, in Arnsberg. The “Made in Germany” seal of quality applies without reservations.

Investing in the future. Dallmer does not only invest money in state-of-the-art machine technology, but also in training and further education for its employees. This ensures that there is specialist know-how at the location.

Bringing together strengths. In order to produce drainage solutions which set standards, you need a genuine innovative spirit and a high degree of experience – and state-of-the-art technology.

Every detail counts. Quality is our top priority. If we all work towards this same goal, we are capable of meeting even the highest demands.

Anti-flooding valves

Page 09

Anti-flooding valves: No more flooding

Safe in
every situation

No public sewer system can drain off extreme volumes of water, such as those occurring after cloudbursts or thunderstorms, which means that short-term overloading is unavoidable. This is why municipal drainage statutes generally stipulate that all rooms and courtyards below backflow level require protection against backflow. For this type of application, Dallmer manufactures its anti-flooding valves and backflow-proof cellar drains.

The Stausafe product series offers protection against flooding by means of shut-off devices for continuous pipelines with faecal-free wastewater (Stausafe E, H and RS). Anti-flooding valves conforming to DIN EN 13564 such as the Stausafe F offer protection for continuous pipelines for faecal wastewater. Even in the event of a complete power failure (e.g. storm), its safety functions will continue to operate for up to a further four days, thanks to an integrated emergency power supply (8× standard AA alkaline manganese 1.5 V batteries).

The high-quality and very durable stainless steel closure valves in Stausafe E, H and RS models are closed by means of the gravity principle, as automatic pendulum flaps, and as such they also protect against uninvited guests from the sewers.

DallSafe utility drains protect against flooding too. They are equipped with a triple safety device conforming to DIN EN 13564 and can be used in drain points for faecal-free wastewater, e.g. in level-access shower.

Discover our anti-flooding devices:
dallmer.com/cellar-anti-flooding

What else might interest you: The DallDrain point drains for floor drainage. Installation technicians are provided with an assembly-friendly, highly flexible floor drain for drainage of all sealed surfaces, for example in the bathroom, spa and cellar.

Stausafe RS

Anti-flooding valves

Stausafe

Variants

Stausafe E without emergency shut-off

Stausafe H with additional manual locking

Stausafe RS with additional manual locking and two anti-flooding flap-valves

Stausafe F with additional electronic flooding sensor and manual locking

Material	ABS
Build-in height	220 – 349 mm*
Nominal width	DN 100 / DN 125 / DN 150 / DN 200*
Type Class	0 / 1 / 2 / 3 / 5* Complies with DIN EN 13564

*Depending on model version.

- ① Manual locking (emergency closure)
- ② Housing cover with tommy screws for tool-free maintenance
- ③ Two automatic anti-flooding flaps-valves made of stainless steel

Advantages

Designs for every need: The simple Stausafe E, Stausafe H with additional manual locking and the Stausafe RS version with additional manual locking and two anti-flooding flap-valves for increased safety. The highest level of protection: Stausafe F for wastewater with faecal waste, with motor-operated cover flap.

- Maintenance-friendly housing made from impact-proof ABS plastic
- Cover flaps that close automatically in the event of flooding
- Closure linkage made from stainless steel

Stausafe F

- Emergency power supplied by batteries
- Test pipe connection
- Control electronics in a surface-mounted box
- Optical / acoustic status display, BMS-enabled

Product information:
dallmer.com/stausafe

Mode of operation of the Stausafe F

Mode of operation in detail

A probe in the anti-flooding valve reacts to wetting and an electrically driven spindle closes the cover flap of the valve. Even in the event of a complete power failure (e.g. storm), all safety functions will continue to operate for up to a further four days, thanks to an integrated emergency power supply (8 × standard AA alkali manganese 1.5 V batteries).

③

- ① Normal mode
- ② Mode of operation in the case of backflow
- ③ Switching device

Advantages

- The electronics box is protected according to DIN VDE 0470 (IP 65)
- The connecting pipe between the Stausafe and the electronics box is 6 m
- A cover flap that closes automatically in the event of flooding
- Maintenance-friendly housing made from impact-proof ABS plastic
- Closure linkage made from stainless steel
- Emergency power supplied by batteries
- Test pipe connection
- Control electronics in a surface-mounted box
- Optical / acoustic status display, BMS-enabled
- Sealing force: 500 Newton
- Closing time: Approx. 9 seconds

Fields of application for anti-flooding valves

Areas of application and products

Throughout the history of modern sewerage systems, there has been a problem with backflow in public systems. If drainage objects and areas located below the backflow level are connected without safety devices, they will inevitably be subject to damage as a result of backflow situations. And unless adequate insurance is in place, dealing with the aftermath can also prove expensive. Anti-flooding valves used for the purpose of backflow protection must comply with the types specified in table 2 (DIN 1986–100).

Field of application	Types of anti-flooding valves approved for use conforming to DIN EN 13564 or DIN 1986-100	Dallmer anti-flooding valves
Faecal-free wastewater, rainwater	Types 2, 3 and 5	Stausafe RS; Stausafe F; DallSafe 200 anti-flooding utility drain
Faecal wastewater	Type 3 with marking "F"	Stausafe F
Rainwater usage systems	Types 0, 1 and 2	Stausafe RS

Installation requirements

Anti-flooding valves can be used if

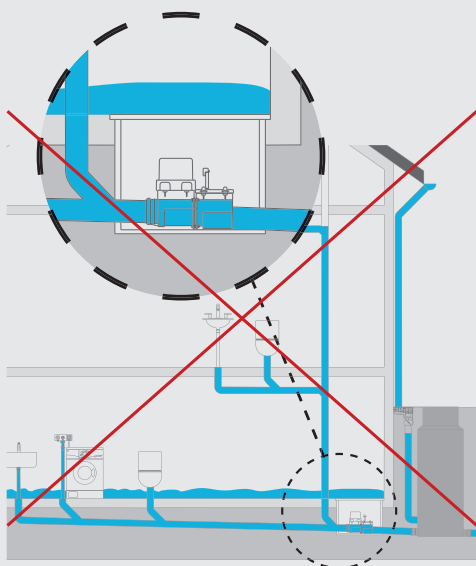

- there is sufficient slope to the channel.
- the rooms are of secondary importance, i.e. there is no risk of impairment to key material assets or the health of the occupants.
- there is only a small circle of users, and this circle have access to a WC above the backflow level.
- in the event of backflow, it is possible to cope without the use of the drain point in question.

Planning and installation

The installation location of the Stausafe F must be such that it protects all outlets prone to backflow. If planning a new project, downpipes from upper storeys that are above the backflow level must not be routed via the Stausafe. Anti-flooding valves must be installed in a way that permits both access to functional parts that require maintenance and the execution of functional tests (as per DIN 1986-33).

Please note

Installation of anti-flooding valves must include a 1 m settling section either side of the valve. The Stausafe has a factory-fitted height difference of 31 mm between inlet and drain. The drainage pipe must have a minimum slope of 1%. The anti-flooding valve must be installed so that it is level in both longitudinal and transverse direction.

Utility and floor drains

Page 19

Utility and floor drains: Our quality for your safety

Reliable protection and interruption-free drainage

Flooding from heavy rain represents an increasing threat, in particular for spaces in semi-detached houses below the backflow level. After all, no public channel network can easily drain extreme quantities of water; short-term overloads must be calculated in from the outset in the planning stage.

For reliable protection and interruption-free drainage, Dallmer drains with or without anti-flood protection offer optimum solutions for many installation situations. Below the backflow level, the DallSafe 200 / Stone (utility drain conforming to DIN EN 13564 with triple safety device for wastewater that doesn't contain faecal waste) makes it possible to install even level-access showers. Ball valves, anti-flooding flap-valves and manual shut-offs ensure the same triple safety, while the tileable grate delivers custom design. Above the backflow level, if there are no specific requirements for the seal, utility drains without backflow protection as well as the practical PRONTO universal drain can be used.

Page 28

Utility drains with anti-flooding valve and sealing option

Variants

DallSafe 200/1 K with plastic grate and sludge trap

DallSafe 200/1 SES with stainless steel grate and sludge trap

DallSafe 200/1 Stone with stainless steel grate for tiling

110/3 with three-sided connection option, DN 70 inflow

Material	Drain body and frame made from polypropylene, grate made from polyamide, ABS or stainless steel*
Grate dimensions	200 × 200 mm (DallSafe), 255 × 185 mm (ball seal)
Build-in height	24 – 290 mm*
Load class	K 3 (300 kg)
Flow rate	1.59 l/s (DallSafe), 1.62 l/s (ball seal)

*Depending on the version

- ① Grates are height-adjustable, 24 – 120 mm
- ② Raising piece with sealing sleeve for seals conforming to DIN 18534, for insulation and screed, 120 – 290 mm
- ③ Sealing set for the connection of bituminous sealing against ground moisture
- ④ Manual shut-off
- ⑤ Self-inflating ball valve
- ⑥ Self-aligning cover flap
- ⑦ The trap
- ⑧ Feed DN 70 for connecting washing machine and sink

Advantages of DallSafe

The flexible solution for utility spaces: DallSafe K with plastic grate and sludge trap, DallSafe SES with stainless steel grate and sludge trap as well as DallSafe Stone with stainless steel grate for tiling can even be used in level-access showers, thanks to their sealing option. (Ball seal 110 is a suitable option where there are no particular requirements for the seal.)

- Type 5 tested acc. to EN 13564, for faecal-free wastewater
- Threefold safety thanks to ball valve, anti-flooding flap-valve and manual shut-off
- Housing made of highly impact-resistant polypropylene, which can be installed directly in the raw concrete surface
- Flexible installation depth 224 – 560 mm
- Grate swivels for optimum adaptation to tile pattern
- Test pipe connection
- Tool-free removal of backflow unit and trap insert
- Easy cleaning
- Complies with the requirements of DIN EN 1253

Variants

61 AK with vertical outlet

57 AK with side outlet

71 without inlet connection

71/3 with DN 70 inlet connection

Material	Drain body and frame made from polypropylene, highly impact-resistant Grate made from polyamide, ABS or stainless steel*
Dimensions	200 × 200 mm (DallSafe), 255 × 185 mm (ball seal)
Load class	K 3 (300 kg)
Flow rate	1.47 l/s – 2.7 l/s*
Sealing water height	50 – 60 mm*

*Depending on the version

- ① Polyamide cover plate
- ② Hair sieve
- ③ Height-adjustable grate
- ④ Removable bell-type trap insert

Advantages

You're sure to find the right utility drain for any utility space: The highest flow rate for utility drain 71 with DN 100 outlet, with additional DN 50 (version 71/1) and DN 70 (version 71/3) inlet connections. Variable rotatable grate for 57/61 utility drains.

- Drain body with removable bell-type trap insert (61 AK)
- Hair sieve (57/61 AK) / sludge catcher (71)
- Rotatable and height-adjustable grate (57/61 AK)

Variants

PRONTO

PRONTO K

PRONTO Primus

Material	Highly impact-resistant outlets made of polypropylene, with moulded lip seals made of TPE Frame made of stainless steel or polypropylene, grate made of stainless steel or aluminium*
Frame dimensions	120 × 120 mm
Load class	K 3 (300 kg)
Flow rate	0.4 – 0.8 l/s*

*Depending on the version

- ① Frame made of stainless steel
- ② Trap insert and rodding eye
- ③ Lip seal

Advantages

Floor drain for universal use in outdoor areas, gardens and utility spaces. Anywhere where there is no special waterproofing membrane specification, the PRONTO trap insert is a quick and cost-effective solution. Simply cut the pipe flush with the floor and insert the trap. Fitted with strong lip seals, the drain body is height adjustable up to 75 mm. The Primus design with sealing water and mechanically effective block is ideal for applications with irregular use.

- Trap insert and rodding eye, sealing water height 50 mm
- Universal lip seal

DALLMER anti-flooding valve Stausafe F

according to EN 13564 type 3 (F)
operation conforms to DIN 1986-100:2002-03 for use with faecal waste water.

SPECIFICATION

- electronic flood sensor
- flap with electrically operated lock
- secondary stainless steel flap with manual lock
- stainless steel pivots
- sealed compartment for motor
- emergency power by batteries
- test-port
- easy-to-install ABS housing
- inspection cover with wingnuts can be opened for maintenance without tools
- electronic controls in box for on-wall mounting with warning lamp/buzzer can be used with central building control systems.

flaps: 316L stainless steel/HDPE

power supply: 230 V/0,5 A

connection cable: 6 m, PUR, 5 x 0.75 mm²

motor supply: 12 V low voltage

emergency power: batteries, max. 6 days

sensor: coaxial electrode

sealing force: 500 newtons

closing time: approx 9 seconds

Non-return valves

DALLMER non-return valve RS 4

vertical or horizontal installation
with rising ball seal.

MATERIAL

body polypropylene

- ▶ non-return valve RS 4.5
with two cleaning eyes
- ▶ non-return valve RS 4.7
with one cleaning eye

ITEM	DN	PART NO.
non-return valve RS 4.5	DN 50	840028
non-return valve RS 4.7	DN 70	840042

RS 4 non-return valves give a practical solution to back-flow in "problem" installations.

The rising-ball mechanism prevents water flowing back into baths or showers.

Type RS 4 non-return valves are used to prevent back-flow in pipework, but should not be regarded as anti-flooding valves conforming to DIN 1997. These non-return valves are not permitted to be installed instead of anti-flooding valves below flood level.

non-return valve RS 4.5

non-return valve RS 4.7

Utility drains with anti-flooding

DALLMER anti-flooding drain DallSafe 200/1

conforming to DIN EN 1253

for EN 13564 type 5, operation conforms to DIN 1986-100:2002-03 for use with grey waste water outlet DN 100 horizontal (3 degrees fall).

SPECIFICATION

- automatic rising ball
- flap-valve on outlet
- manual lock
- trap insert, 50 mm water seal (conforming to DIN EN 1253)
- tool-free removal of trap insert
- test-port
- DN 70 side inlet
- temporary blanking plate
- grate height adjustable 24 – 120 mm

MATERIAL

body polypropylene

- ▶ **anti-flooding drain DallSafe 200/1 Stone**
anti-flooding drain with stainless steel grate, can be tiled individually, grate 304 stainless steel, 200 x 200 mm

utility drain type 71/3

Accessories for utility drains

DALLMER grate for utility drain 71

used with type 71 utility drain

- ▶ **grate for utility drain 71, grey**
ABS, grey, 225 x 155 mm, load class K 3 (300 kg)
- ▶ **grate for utility drain 71, white**
ABS, white, 225 x 155 mm, load class K 3 (300 kg)
- ▶ **grate for utility drain 71, cast iron**
cast iron, 225 x 155 mm, load class L 15 (1.5 t)

ITEM	DIMENSION	PART NO.
grate for utility drain 71, grey	225 x 155 mm	714923
grate for utility drain 71, white	225 x 155 mm	714930
grate for utility drain 71, cast iron	225 x 155 mm	714947

grate for utility drain 71, grey

DALLMER grate for Ballstau 110

used with type Ballstau 110 drain

- ▶ **grate for Ballstau 110, grey**
two-part, ABS grey, 250 x 180 mm, load class K 3 (300 kg)
- ▶ **grate for Ballstau 110, stainless steel**
one-part, stainless steel, 250 x 180 mm, load class K 3 (300 kg)

ITEM	DIMENSION	PART NO.
grate for Ballstau 110, grey	250 x 180 mm	724922
grate for Ballstau 110, stainless steel	250 x 180 mm	724762

grate for Ballstau 110, grey

DALLMER extension for utility drain 71

used with type 71 utility drain, can be cut to correct height on site

MATERIAL
ABS, grey

ITEM	DIMENSION	PART NO.
extension for utility drain 71	100 mm	714954

extension for utility drain 71

DALLMER extension for Ballstau 110

used with type 110 Ballstau drain, can be cut to correct height on site

MATERIAL
ABS, grey

ITEM	DIMENSION	PART NO.
extension for Ballstau 110	100 mm	724953

extension for Ballstau 110

PRONTO utility drain

DALLMER floor drain PRONTO

pushes into a pipe, for floor constructions without a waterproofing membrane.

SPECIFICATION

- trap insert removable for cleaning, 50 mm water seal
- flexible sealing ribs

MATERIAL

polypropylene/rubber/TPE
 frame 304 stainless steel, 120 x 120 mm
 grate 304 stainless steel, 115 x 115 mm, load class K 3 (300 kg)

FLOW RATE TESTED TO DIN EN 1253 TAB. 3, (with 20 mm water over grate)

	Required	Dallmer
DN 90	0.8 l/s	0.8 l/s
DN 100	1.4 l/s	0.8 l/s
DN 125	2.8 l/s	0.8 l/s

ITEM	DN	DIMENSION	PART NO.
floor drain PRONTO	DN 90/DN 100	120 x 120 mm	700063
floor drain PRONTO	DN 125	120 x 120 mm	700087

The trap assembly can be easily removed and the fitting used for rodding access.

floor drain PRONTO

DALLMER floor drain PRONTO K

pushes into a pipe, for floor constructions without a waterproofing membrane

SPECIFICATION

- trap insert removable for cleaning, 50 mm water seal
- flexible sealing ribs

MATERIAL

polypropylene/rubber/TPE
 frame polypropylene, 120 x 120 mm

- ▶ floor drain PRONTO K
 grate 304 stainless steel, 115 x 115 mm, load class K 3 (300 kg)
- ▶ floor drain PRONTO K, secured
 grate 304 stainless steel, 115 x 115 mm, secured, class K 3 (300 kg)
- ▶ floor drain PRONTO K Alu
 grate aluminium

FLOW RATE TESTED TO DIN EN 1253 TAB. 3, (with 20 mm water over grate)

	Required	Dallmer
DN 90	0.8 l/s	0.8 l/s
DN 100	1.4 l/s	0.8 l/s
DN 125	2.8 l/s	0.8 l/s

ITEM	DN	DIMENSION	PART NO.
floor drain PRONTO K	DN 90/DN 100	120 x 120 mm	700360
floor drain PRONTO K, secured	DN 90/DN 100	120 x 120 mm	700391
floor drain PRONTO K	DN 125	120 x 120 mm	700384
floor drain PRONTO K Alu	DN 90/DN 100	120 x 120 mm	700339

floor drain PRONTO K

floor drain PRONTO K Alu

PRONTO utility drain

DALLMER floor drain PRONTO Primus

pushes into a DN 100 pipe, for floor constructions without a waterproofing membrane.

SPECIFICATION

- removable Primus trap insert, using a floating bell, which sinks to seal the trap if water evaporates
